

# COCO/HYDRO NUTRIENTS GROWTH SCHEDULE

## B.A.C. CLIMATE CONTROL

Growth Periode	B.A.C. Grow / Bloom nutrients EC	B.A.C. Root/Bloom Stim. 1 to 2 ml per 10 L	pH Hydro	pH Coco	B.A.C. Foliar Spray 20 ml per 5 L	B.A.C. Pro-Active 10 ml per 1 L Spray 10 ml per 10 L Dosage *****	B.A.C. The Final Solution 60 ml per 10 L	B.A.C. F1 SuperBud Booster EC 0,6	Watering (plant evaporation) per m2 *****	R.V. Air humidity	Water Temp. C°	Room/plant temperature Day = Night	Upright ventilators On/Off
Light = 18 hours  (add Funky Fungi)*	1st day growth	1,6 grow	Root stimulator	5,0	6,0	Spray 1 time			10 L	85%	22°	24/24 gr	Off
	2nd day growth									80%		24/24 gr	Off
	3rd day growth									80%		24/24 gr	Off
	4th day growth	1,7 grow	Root stimulator	5,0	6,0		Spray 1 time		1 L	80%	22°	24/24 gr	Off
	5th day growth									75%		24/24 gr	Off
	6th day growth									75%		24/24 gr	Off
	7th day growth	1,7 grow	Root stimulator	5,1	6,0				1,5 L	75%	22°	24/24 gr	Off
	8th day growth									75%		24/24 gr	Off
	9th day growth									70%		24/24 gr	Off
	10th day growth	1,7 grow	Root stimulator	5,1	6,0		Spray 1 time		2,0 L	70%	22°	24/24 gr	Minimal
	11th day growth									70%		24/24 gr	Minimal
	12th day growth									70%		24/24 gr	Minimal
	13th day growth	1,8 grow	Root stimulator	5,2	6,0				2,0 L	70%	22°	24/24 gr	Minimal
	14th day growth												
Bloom period													
Light = 12 hours													
1st week bloom	1,8 bloom	Root stimulator	5,3	6,0	Spray 1 time	Dose once a week	** dose 1 time		2,5 L	65%	22°	28/20 gr	50%
2nd week bloom	1,9 bloom	Bloom stimulator	5,5	6,0		Dose once a week			3,0 L	60%	22°	28/20 gr	50%
3rd week bloom	2,0 bloom	Bloom stimulator	5,8	6,0	Spray 1 time	Dose once a week			4,0 L	60%	22°	28/20 gr	50%
4th week bloom	2,1 bloom	Bloom stimulator	5,8	6,0		Dose once a week			5,0 L	55%	22°	28/20 gr	75%
5th week bloom	2,2 bloom	Bloom stimulator	5,8	6,0		Dose once a week			6,0 L	55%	22°	28/20 gr	75%
6th week bloom	1,7 bloom	Bloom stimulator	5,8	6,0		Dose once a week		0,6 EC Booster	8,0 L	50%	22°	28/20 gr	100%
7th week bloom***	1,8 bloom	Bloom stimulator	5,8	6,0		Dose once a week		0,6 EC Booster	10,0 L	45%	22°	28/20 gr	100%
Second last week	1,9 bloom	Bloom stimulator	5,8	6,0		Dose once a week		0,6 EC Booster	9,0 L	40%	22°	28/20 gr	100%
Last week	1,4 bloom	Bloom stimulator	6,0	6,0		Dose once a week	** dose 1 time	0,6 EC Booster	8,0 L	40%	22°	28/20 gr	90 to 80%

\* These B.A.C. Funky Fungi must be mixed with the new cocos or u must put it into the rockwoolblock before planting the crop in the new growth medium. When you harmonize the pH value, the Cocos must be upgraded with B.A.C. Chalk/Line. Add B.A.C. Funky Fungi to the new top layer of cocos.

\*\* B.A.C. The Final Solution only needs to be added once to the nutrients or stimulator in the first week of the bloom period and the final week of the bloom periode. So NOT every day of that week!

\*\*\* The number of growth days and bloom weeks indicated of course depend on the type and number of plants per m2 and climate. Evaporation of your plants and watering per m2 are interrelated because the water will also partly evaporate by the growth medium and not only by the plants. The amount of watering therefore depends on plant evaporation and substrate surface. Moistening the medium depends on the total amount of medium used, the type of growth medium (hydro or cocos) and the amount of water in the medium supplied (after moistening the medium, you should for example be able to squeeze 10 drops of water from a fistful of medium). This growth schedule serves as a guideline. Always check yourself if plants require adjusting the climate, watering, and the amount of nutrients.

\*\*\*\* If you need more info on nutrient guidelines and growth schedules, please contact our helpdesk, which is available by e-mail (info@baconline.nl) or by telephone.
